

AC-17 INSTALLATION KIT WITH HOSE FOR E-Z RELEASE TRANSOM MOUNT BRACKET AND PUMP

INCLUDES: 90 DEGREE HOSE BARB, RELEASABLE HOLDER FOR SECURING HOSE AND WIRE LEADS TO TRANSOM, FEMALE GARDEN THREAD FITTING FOR ATTACHING HOSE TO BAIT TANK INLET, SEVEN FEET OF 3/4" REINFORCED VINYL HOSE, AND TWO CLAMPS.

INSTALLATION INSTRUCTIONS:

Push the "L" fitting onto the pump outlet and secure with the provided clamp. If needed, cut off the excess hose from the top, insert hose barb with garden hose fitting into hose and clamp securely. The hose and wires can be held against the transom with the releasable holder. Secure it to the transom with the provided SS screw.

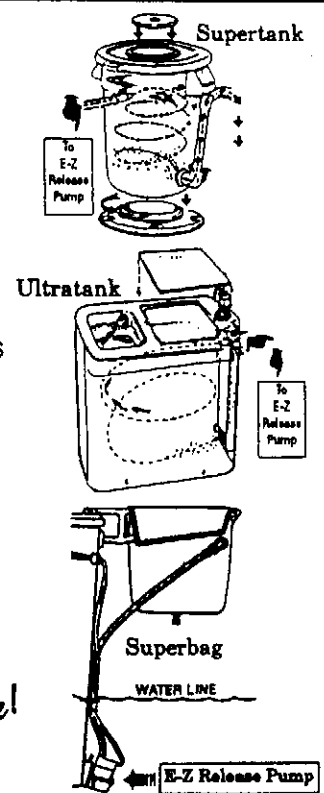

If you don't want to run the wires and hose over the transom, use a through transom electrical fitting that is available at marine hardware stores, and our AC-5 thru-transom hose connector with garden hose threads each side.

The submersible RULE pump and wire leads are completely waterproof! It is long lasting under continuous operation, has low amperage draw, and is guaranteed for 12 months. It can be removed from the E-Z Release bracket cup, for cleaning or replacing, by loosening one screw.

The reliable "E-Z Release" pump system is a perfect companion for all live bait containers, and is easily installed on any boat.

We highly recommend this pump system for use with all of our Patented, "Reverse Flow" bait tanks. This self cleaning system is used in all of our Supertanks, Ultratanks, and Superbags, that have been proven to keep bait **Alive & Lively** longer than any other tanks on the market, **BAR NONE!**
